

Thank you for the opportunity to comment on proceeding FCC 02-98 concerning the new 60 meter Amateur Radio Band allocation. It would serve the amateur community best to have separate sub-bands for CW , Digital and Phone modes, and to limit power levels to 100 watts. It is a domestic allocation, thus no need for higher power levels. The 100 watt maximum would prevent many interference problems caused by high power "appliance operators" while enhancing opportunities for more technically inclined low power experimenters. Please observe current 40 & 80m bands in that regard.

This is an unique opportunity to provide a new band allocation structured to work to the bedrock strengths and spirit of amateur radio.
Thank you.
